

CollPlant Biotechnologies

WE'RE HIRING!

R&D Project Manager

Company Description

CollPlant Biotechnologies (NASDAQ:CLGN) is a regenerative and aesthetic medicine company focused on 3D bioprinting of tissues and organs, and medical aesthetics. The Company's products are based on its recombinant human collagen produced with CollPlant's proprietary plant based genetic engineering technology. These products address indications for the diverse fields of tissue repair, aesthetics, and organ manufacturing, and are ushering in a new era in regenerative and aesthetic medicine. Job Description

We are seeking an experienced and highly motivated R&D Project Manager to manage the development of innovative medical devices, and regenerative medicine solutions. The successful candidate will be actively engaged in hands-on research and development activities to drive new product development from concept to commercialization, overseeing project timelines, and ensuring compliance with regulatory standards

Key Responsibilities:

- Manage R&D projects related to the development of medical devices in the field of regenerative medicine, ensuring alignment with company objectives.
- Actively participate in the design, development, prototyping, and testing of the product under development
- Supervise and conduct hands-on laboratory work, including formulation development, material characterization, mechanical testing, and biological assessments to ensure product performance
- Supervise activities related to preclinical studies and analytical methods development.
- Develop detailed project plans, outlining tasks, timelines, dependencies, and resource requirements.
- Prepare comprehensive project reports, presentations, and documentation for internal and external audiences
- Identify and mitigate project risks through proactive planning and execution strategies.

Qualifications & Skills:

- PhD in Bioengineering, Material Science, Chemistry, Biology or any other related field.
- Experience: Minimum 3+ years of experience in pharma or medical device development
- Strong knowledge of biomaterials, chemistry, tissue engineering, and regenerative medicine applications.
- Extensive hands on laboratory and prototyping experience, including fabrication, processing, and in vitro testing of biomaterials and devices.
- Proven experience in pharmaceutical/medical device project management, understanding the design control process or IND/NDA process Proficiency in project management tools and software
